

Meindl celebrates the anniversary of a legend!
Meindl celebrates 20 years of Island.

More than one million pairs sold is success that speaks for itself. So do our numerous national and international distinctions and awards. In the history of our company, the "Island" plays a very special role and is the very embodiment of our corporate philosophy: combining tradition with innovation and continuously searching for the optimum solution.

With this in mind, we have been at work constantly improving and developing the Island over the years. The latest Island model now being introduced here differs in some valuable and innovative new features from its predecessors as can be seen from the slightly modified look.

It may not be immediately visible but it is certainly noticeable – the enhanced AIR-ACTIVE® technology. A better foam concept with additional MFS padding foam and the new design of powerful ventilation of lining and upper material make the Island even more breathable.

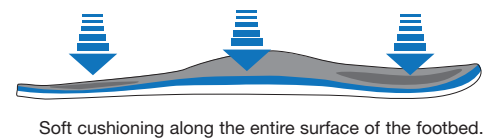

Our Island has brought us record success. The classic among trekking boots, it is the preferred choice of mountaineering enthusiasts around the world and has been for twenty years. What is more we are convinced it will remain the expert choice and the top boot in the future.

Island MFS® Active

Air-Active® SOFT PRINT drysole

The SOFT PRINT foam is put directly on the drysole fleece. No glue is used for connecting the two materials to ensure optimum moisture transfer.
